

Naturfruit® -Basic

EC FERTILISER / NK LIQUID FERTILISER
FOLIAR AND SOIL APPLICATION

GUARANTEED CONTENT

Total Nitrogen (N).....	3 % w/w (4,3 % w/v)
Urea Nitrogen (N).....	3 % w/w (4,3 % w/v)
Potassium Oxide (K ₂ O)	30 % w/w (43,5 % w/v)
EDTA.....	1 % w/w (1,4 % w/v)

Naturfruit-Baisc is a soluble liquid fertilizer containing a high Potassium concentration. The application is by fertigation or foliar spray during the etaps of the cycle with higher Potassium exingency. Thanks to its formulation Naturfruit-Basic is easily uptaken by the plant tissues that need it, and it improves the quality of the fruits and the general condition of the plant.

APPLICATION

Naturfruit can be applied in every moment of the cycle as a Potassium source, but this product is specially indicated during the etaps with more extractions:

- Citrus and fruti tree: during the growth, ripening and colouration of the fruti
- Strawberry, horticulture and industrials: Starting when the fruits, roots and other reserve organs begin to accumulate sugars.
- Olive tree: during the fruit growth
- Ornamentals: before and after the flowering period
- Vineyard: Starting with the fruit setting

CROPS FOR WICH IT IS RECOMMENDED

Even it Potassium an element that crops need during all the cycle, there are certain periods that its presence inside of the plant at an optimum level is essential in order to obtain high productions and quality harvests.

the Potassium presence in the plant at an optimum level, is fundamental to:

- Obtain high productions
- Favorise the sugar sintesys and its accumulation in the reserve organs and in the crops where the quality of the harvest depends on its sugar contents.
- Introduce the change of the fruit's colour
- Provides rigidity and consistence to the fruits and to the leaves.
- Improve the drought resistance
- Improve the buds mellowing

Thanks to the foliar spray of Naturfruit-Basic, Potassium localice in fruits and leaves.

DOSAGE

FOLIAR SPRAY: Fruit trees and citrus, 250-350cc/Hl; Horticultural crops, strawberry and floriculture, 200-300cc/Hl.

SOIL APLICATIONS: Fruits trees and citrus, 20-30 l/ha with several applications: Horticultural crops, strawberry and floriculture, 20-30 l/ha with several applications.

Harvest Enhancers

Potash is a macro nutrient. It is necessary all along the crop growth, but it is when the crop makes reserves when that needs are maximized.

Specifically if one want to obtain high yields of a high quality, potassium levels in the plant must be optimum.

With a great number of soils this is not easy to achieve using the traditional fertilizers.

The products that the Naturfruit Range includes have a high potash concentration and are formulated in order to optimise its uptake.
